SUMMARY

Motivated Full-Stack Developer (MERN) and IT undergraduate with hands-on experience building scalable web applications using React.js, Node.js, Express.js, and MongoDB. Proficient in Data Structures & Algorithms in C++ with a strong foundation in problem-solving. Passionate about engineering clean, performant software and eager to contribute to impactful, large-scale systems.

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Redux.js, Tailwind CSS, Responsive Web Design

Backend: Node.js, Express.js, REST API Design

Databases: MongoDB, Mongoose ODM

Tools & Platforms: Git, GitHub, VS Code, Postman, npm

Concepts: Data Structures & Algorithms, OOP, MVC Architecture, CRUD Operations, Authentication (JWT), Agile

EDUCATION

Indian Institute of Information Technology (IIIT) Una

Una, Himachal Pradesh

Bachelor of Technology – Information Technology

2024 – 2028

- Semester 1 SGPA: **8.59** Semester 2 SGPA: **7.91**

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Discrete Mathematics, Computer Networks

Rukmani Birla Modern High School

Rajasthan, India

Class XII (CBSE)

2024

- Percentage: **93%**

Rukmani Birla Modern High School

Rajasthan, India

Class X (CBSE)

2022

- Percentage: **94%**

PROJECTS

VideoTube | *Node.js, Express.js, MongoDB, Mongoose, JWT, Cloudinary, Railway*

2025

- Built and deployed a production-ready YouTube-inspired REST API with complete user authentication (register, login, JWT + refresh tokens), video upload & management, likes, comments, subscriptions, playlists, and a channel dashboard with analytics.
- Implemented complex MongoDB aggregation pipelines using `$lookup`, `$group`, `$addFields`, and `$unwind` for channel analytics and paginated list endpoints across all resources.
- Resolved Linux case-sensitive import path crashes on Railway, fixed Multer's missing `public/temp` upload directory using `.gitkeep`, and managed production environment variables — bridging the gap between local and cloud deployment.
- Deployed on Railway after Vercel proved incompatible with traditional Express.js backends; published full live API documentation.

Personal Blog Website | *React.js, Appwrite, Tailwind CSS*

2025

- Designed and developed the complete frontend from scratch using React.js and Tailwind CSS, with Appwrite consumed as a Backend-as-a-Service for authentication, database, and file storage.
- Implemented features including user authentication, rich-text post creation/editing, and dynamic routing — eliminating the need for a custom backend while maintaining full-stack functionality.

ACHIEVEMENTS & ACTIVITIES

- Actively solving algorithmic problems on LeetCode with focus on arrays, strings, recursion, and dynamic programming — building consistent problem-solving habits.
- Shipped two independent full-stack projects (VideoTube REST API and a React/Appwrite blog) entirely self-directed, going beyond coursework to study production codebases and real-world backend architecture.
- Active member of the IIIT Una developer community, participating in hackathons and collaborative coding events.
- Scored **94%** in Class X and **93%** in Class XII (CBSE), demonstrating strong academic discipline.
